ABSTRACT

10

15

According to a method for packaging CDs, DVDs and similar digital record carriers in a corresponding foldable package (10), including a blank (11) and one or more trays (12) glued to corresponding blank sections (13), the discs (1) are first introduced into housings (15) made in the trays (12) before the trays are applied to the blank sections (13). After a suitable glue has been applied to the trays (12), containing the discs (1), the trays (12) are set in contact with the sections (13), and then the so obtained package (10) is conveyed toward further work stations. The glue can be applied to the trays (12) also before placing the discs (1), and anyway, in any moment before the trays (12) are applied to the blank sections (13).
